

THE ECONOMY AT A GLANCE

ECONOMIC HIGHLIGHTS

July 28, 2025
Vol. 92, No. 107

DEBT A HIGH LEVEL OF GDP

With tax cuts now approved as part of the One Big Beautiful Bill Act, market participants are starting to take a closer look at U.S. debt. They don't appear to like what they see, despite prospects of reductions in federal spending through President Trump's plans to shrink the government. The yield on the benchmark Treasury 10-year bond has jumped from 4.0% to 4.4%. There is no doubt that U.S. debt levels have quickly grown over the past 10 years, and total U.S. debt is now more than 120% of GDP, according to the Office of Management & Budget. That is the highest level since World War II. Despite more than 10 years of economic growth prior to the pandemic, debt only increased as a percentage of GDP. Then, spurred by the fiscal spending allocated to fight the impact of COVID-19, debt levels surged further. This is not a problem that has to be fixed today; Japan's current debt-to-GDP ratio is around 250%. But we do note that interest expense now accounts for 3.7% of U.S. GDP, up from 2.3% in 2020 and compared to the historical average of 3.0% and a high of 5.0% in 1991. Ideally, politicians should start to establish a plan to address the issue in the next 10-15 years. If the trend persists and is not reversed, a debt debacle could result in a weak dollar and persistent hyper-inflation. That would send interest rates even higher and cut into economic growth and equity valuations.

ECONOMIC HIGHLIGHTS (CONTINUED)

HOME BUILDING MAY DRAG ON 2Q GDP

Residential fixed investment, the category that includes home building in the Gross Domestic Product report, is poised to decline in 2Q after a “subdued” spring selling season. “While longer term, the outlook for the housing market remains favorable, driven by demographics and an undersupply of homes, consumers are continuing to demonstrate a lack of confidence about the short term, which has impacted their home purchase decisions” said KB Home CEO Jeffrey Mezger in the company’s 2Q earnings call. “Affordability challenges have persisted, compounded by the variability in mortgage interest rates, which remain elevated, as well as macroeconomic and geopolitical uncertainty. These factors resulted in a more subdued demand during the spring selling season,” Mr. Mezger added. The category is poised for an annualized decline of 6.4% according to the Federal Reserve Bank of Atlanta’s GDPNow indicator for the second quarter. Residential investment may trim about a quarter point from 2Q GDP, which the Atlanta Fed expects to grow at an annualized 2.4%. Our estimate is for a 1.8% increase in 2Q GDP.

HOUSING MARKET TRENDS

INFLATION RELATIVELY STABLE

Two important inflation reports were released recently and both signaled that pricing pressures were essentially unchanged from the prior month. But inflation is still not at the Fed’s 2.0% goal. Let’s first take a deeper dive into the Consumer Price Index. The news here was so-so, as the month-to-month headline number increased three-tenths of a percent from the previous month; the annualized rate was 2.7%, up from 2.4% a month ago. Meanwhile, the core inflation rate (ex-food and energy) rose two-tenths of a percent month to month, and ticked higher to an annual rate of 2.9% from the prior reading of 2.8%. The Producer Price Index measures pricing trends farther up the supply chain, at the manufacturing level. Here, the news was better. For example, the PPI final demand annual rate through June was 2.3%, compared to 3.7% in January. Looking ahead and based on the fundamentals, we expect pricing pressures to ease in the months ahead as the housing market cools due to high mortgage rates and the price of oil stays below \$90 per barrel. But the current low price of oil reflects a new wild card that has entered the forecasting picture: Donald Trump’s trade wars. His tariffs -- should they ever go into full effect -- will almost certainly raise prices, sending the inflation rate higher again.

FINANCIAL MARKET HIGHLIGHTS

FEAR INDEX BACK TO NORMAL LEVELS

After a period of intense market volatility in the spring -- including one point at which the S&P 500 had fallen 19% from its all-time high -- the closely-watched VIX Volatility Index has declined back below its historical average of 20 as summer swings into high gear. Meanwhile, stock prices have recovered all of the lost ground and the benchmark S&P is once again setting record highs. Our Base Case for 2025 called for another year of growth in the U.S. economy (and no recession), declining interest rates, and double-digit EPS growth. Each of those planks in the Base Case platform is currently in place. So assuming that the Trump administration gets its economic growth plans firmly on track, there's reason to expect that equity prices can continue to climb. Back to the market, the current VIX fear index reading is well below the 10-year average of 20 and consistent with a bull market. We continue to think that the S&P 500 is in the early/mid-stage of a bull market that dates to October 2022. And while the path for equities won't be straight up, we suggest investors favor growth stocks in their portfolios at the current market and economic juncture.
